

## FORCE AUTHENTICATION

This tool allows an admin to authorize a user without the user needing to authenticate using the login page or captive portal.

The admin can also search a specific MAC address or IP address in the list. The 'State' column indicates whether a user has authenticated successfully in the system or not. The 'State' column also allows an admin to authenticate or logout DHCP lease using 'Authenticate' button or 'Logout' button.

**For authenticate or logout the user go to the-**

**Step1:-**

[Tools->Diagnostic Tools->Force authenticate](#)

**For Authenticate the users-->**

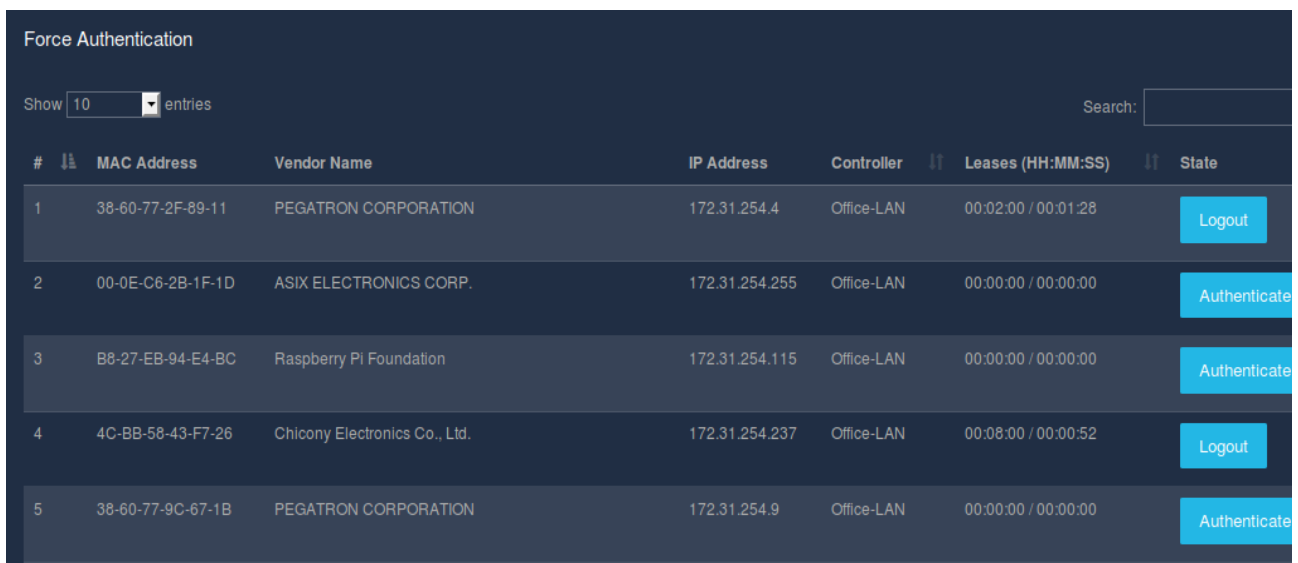

**Step2:-**

If user state is showing as Authenticate then click on authenticate option .User will be authenticated and get internet access

**For Logout the user-->**

**Step3:-**

If user state is showing as Logout then click on Logout option.User will be logout and disconnected from unibox network.

#	MAC Address	Vendor Name	IP Address	Controller	Leases (HH:MM:SS)	State
1	38-60-77-2F-89-11	PEGATRON CORPORATION	172.31.254.4	Office-LAN	00:02:00 / 00:01:28	Logout
