

How to setup URL Filtering in Unibox

The screenshot shows the 'Control : Content Filter' page in the Wifi-soft Unibox. The page title is 'List Content Filter Policies'. It features a search bar and a table with the following data:

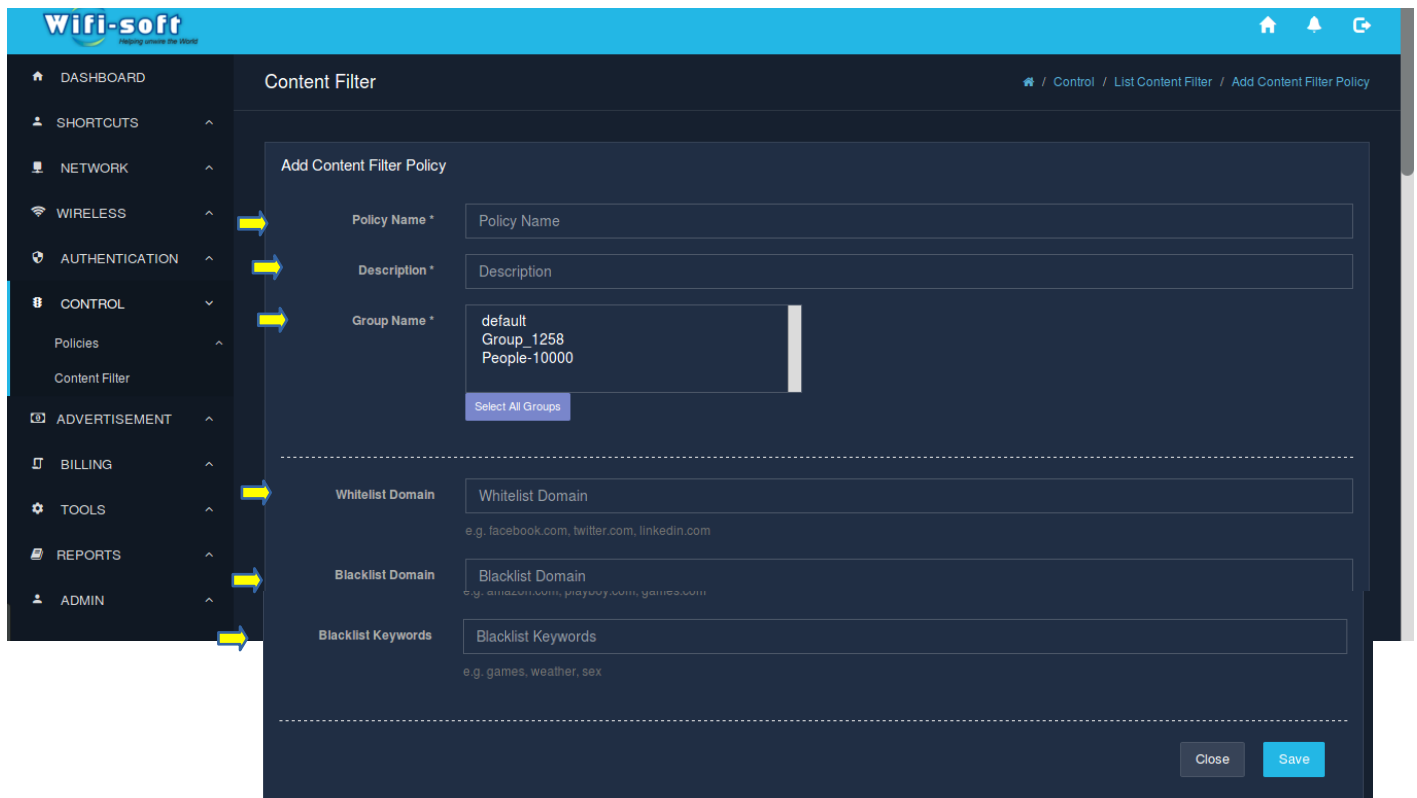

#	Policy Id	Policy Name	Description	Group Names	Operations
1	1	default	This is default policy without any restrictions.	default,Group_1258,People-10000	 

Below the table, it says 'Showing 1 to 1 of 1 entries' and includes 'Previous', '1', and 'Next' navigation buttons. A '+ ?' button is located in the top right corner of the table area. The left sidebar shows the 'CONTROL' menu expanded to 'Content Filter'.

This page displays all groups based content filter policies defined in the system. The policies are displayed in a table with Policy Name, Policy Id and Description and Group Names. The policy will apply to all the groups defined in the rule.

1. Add the content filter policies-

For add the content filter polices we have to click on the '+' icon. You will get the following page.

The screenshot shows the 'Add Content Filter Policy' form in the Wifi-soft Unibox. The form has the following fields and options:

- Policy Name ***: Text input field with placeholder 'Policy Name'.
- Description ***: Text input field with placeholder 'Description'.
- Group Name ***: Text input field with a dropdown menu showing 'default', 'Group_1258', and 'People-10000'. Below the dropdown is a 'Select All Groups' button.
- Whitelist Domain**: Text input field with placeholder 'Whitelist Domain' and example text 'e.g. facebook.com, twitter.com, linkedin.com'.
- Blacklist Domain**: Text input field with placeholder 'Blacklist Domain' and example text 'e.g. amazon.com, playny.com, yahoo.com'.
- Blacklist Keywords**: Text input field with placeholder 'Blacklist Keywords' and example text 'e.g. games, weather, sex'.

At the bottom right of the form, there are 'Close' and 'Save' buttons. The left sidebar shows the 'CONTROL' menu expanded to 'Content Filter'.

Add comma separated whitelist domain names and blacklist domain names which you want to add.

This page allows administrators to define (select) the domains that should be blocked by the content filtering service. All websites that fall under these domains will be automatically blocked by the filter.

UniBox maintains a database of domains/urls that belong to each category. When the user tries to access the domain, UniBox checks if the domain is in the blocked list and will block the user access. The user is redirected to a blocked page.

- **Policy Name-** An unique name for the group policy.
- **Description-** Short description about the policy.
- **Group Name-** Select the user group for the policy.
- **Whitelist Domain-** Domain name (e.g. facebook.com) of the Whitelist URL. Enter comma separated multiple domain names for which you want to give access without authentication.
- **Blacklist Domain-** Domain name (e.g. facebook.com) of the Blacklist URL. Enter comma separate multiple domain names which you want to block.
- **Category-** Select the domains from the list that should be filtered. All websites that fall under these domains will be automatically blocked by the filter.

Note- Administrator can also edit and delete the content filter policies.
