

## How to setup email relay

1. Go to Billing Section and click on Email Relay submenu.
2. You will find Email relay configuration window.
3. Click on the checkbox in front of enable Email Relay.

4. To configure Mail Relay Select Port Number from the list either “465(SSL)” or “587(Start TLS)”.
5. Set the Gmail username and App password which are configured and generated through App.
6. Click on submit button to save all configuration.

### **NOTE:**

**To generate App password. Please download the file under How to Get App Password and follow the steps mentioned in the file.**
